

INTERNET COLLABORATION PORTAL

NEXTrack™ is a web based multi-faceted tool with a real time interface to FreightMaster TMS® that increases visibility and communication among your trading partners, carriers, and customers. Branded with your Company logo and access via your website, users will be able to see order confirmation, pick up & delivery confirmation, real time shipment status, and reporting capabilities.

NEXTrack™ enables shippers to conform to customer specific routing guides and adherence to best practices in their carrier selection process using our **Cascading Web Tendering** functionality. Using our advanced notification system, the system alerts carriers of tendered loads, allowing them to accept or reject loads online before cascading to the secondary carrier. NEXTrack™ in conjunction with FreightMaster TMS® can improve operating efficiencies by automating the tendering process, reducing the amount of time it takes to tender loads to carriers.

Online Freight Bill Settlement reduces overhead by enabling carriers to enter freight invoices online upon delivery confirmation, triggering our automated auditing routine to reduce your tender to settlement time. Additionally it allows for more accurate billing and payment for the services rendered.

Benefits

- Visibility
- Load status updates
- Real time
- Event notification
- Appointment tracking
- Reduced labor
- Reduced costs
